

Compound Generator (DC) In conjunction with three-phase AC induction Motor is a tough electrical training system built on an aluminium profile rack with a durable table top panel. For easy understanding and connections, each panel features an ABS/MS moulded strong container with 4mm shrouded connectors that indicate circuit diagrams and their connection tag numbers. The product will assist you in thoroughly understanding the fundamental concepts and operation of a DC compound Generator.

- Aesthetically designed Aluminum Profile Structure
- ISI/CE marked branded Components/ Meters are used
- ABS plastic enclosed Panel Board with mimic diagram.
- Panel board mounted on sturdy & safe frame
- Easy to operate in standing position.
- Motor mounted on vibration & shock proof railing
- Space on the railing provided to couple motor & generator using flexible coupler.
- Machine mounted on base frame can be easily interchanged.
- Rear panel is covered with removable transparent sheet.
- All input & output are terminated in 4mm shrouded connector.
